Project: Designing Chain Store database model using SQL

Professor: Dr. Hossein Rahmani

Provider: Abdollah Ebadi

Project Description:

In this project we design database model for a sample chain store which has these features:

- Some branches in different cities
- Customers can purchase their needs and receive it at home
- Customers can pay online or in cash
- Customers will rate to their order
- All orders will be stored in system

Entities:

- Store
- Provider Company
- Employee
- Depot
- Branch
- Goods
- Bank Accounts
- Orders
- Rate
- Factor
